ZOMATO | BUSINESS REQUIREMENT DOCUMENT

# Sales & Customer Analytics

Business Requirement Document: questions that drive decisions

Prepared by **Behara HarshaVardhan**

Tools PostgreSQL · Power BI

# Project Objective

Zomato generates large volumes of customer, restaurant and order data every day. Raw data alone does not help stakeholders decide what to do next. This project turns that data into answers, covering sales performance, customer ordering behaviour, restaurant performance, cuisine popularity and the geographic spread of orders.

## Data Sources

| restaurants | orders | customers |
| --- | --- | --- |
| Identity, city, cuisine, rating, delivery time | Date, items, amounts, status, payment | Profile, city, registration, membership |

The questions below are grouped into four themes. Each one is written to be answered directly from the three tables.

## REVENUE & SALES

5 questions

01 **What is the total revenue generated by the platform?**

02 **How has revenue changed month over month?**

03 **Which cities generate the highest revenue?**

04 **Which restaurants generate the most revenue?**

05 **Which cuisines generate the highest revenue?**

## CUSTOMER BEHAVIOUR

5 questions

06 **Who are the top 10 customers by total spending?**

07 **Which customers have placed the highest number of orders?**

08 **What is the average spending per customer?**

09 **What percentage of customers are repeat customers?**

10 **How many new customers joined each month?**

## RESTAURANT PERFORMANCE

5 questions

11. Which restaurants receive the highest number of orders?
12. Which restaurants have high ratings but low sales?
13. Rank restaurants by revenue within each city.
14. What is the cancellation rate by restaurant?
15. Which restaurants have never received an order?

## ORDER TIMING

3 questions

16. What are the orders placed in a specific month?
17. Which day of the week receives the most orders?
18. Which hour of the day receives the most orders?
